

FEEDLETs

Taste-Masked, Controlled-Release Pellets

LATITUDE Pharmaceuticals Inc. has developed an oral formulation technology involving taste-masked and controlled-release pellets ("FEEDLETs") for veterinary drugs to greatly improve ease of administration and animal safety. Latitude's FEEDLETs can be produced with different sizes and consistencies, and can be fed directly to animals or sprinkled in animal feed.

Key Features and Properties of the FEEDLETs

- Suitable for long-term oral administration of drugs
- Superior taste-masking properties: successfully utilized to mask drugs with multiple animal species
- Controlled/Delayed Release: minimal release of drug in the mouth or upper gastrointestinal tract - increases efficacy and reduces adverse mouth/upper GI events
- Easy administration: can be mixed with feed or treats for simple oral administration
- Palatable and chewable
- Size and consistency can be customized for use with different animals
- Applied to a wide variety of drugs (*e.g., metformin, glucosamine, antacids*)
- Only USP-grade excipients used
- Straightforward manufacturing at low COGS
 - Metformin Feedlets = \$0.20/dose for large animals
